

# TRAX Tutorial Lessons

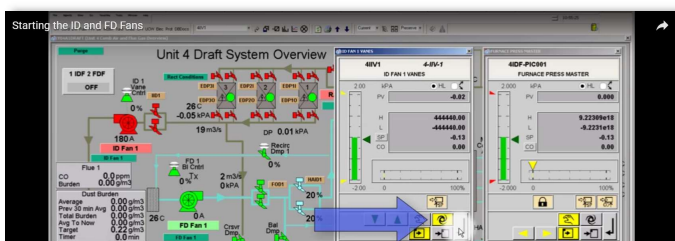

Easy-access, on-demand instruction.

TRAX Tutorial Lessons are customized videos demonstrating specific plant operations. Video topics can cover any plant function: how to put a condensate system in service, how to tie on a generator, etc. The Tutorials supplement training materials and allow operators to practice specific tasks with or without the trainer present.

## Benefits

TRAX Energy Solutions has over 25 years' experience designing and supplying site-specific simulators and training programs to the energy industry. With this program, we expect our customers will see:

- Increased safety and efficiency
- 24/7 training availability
- Improved ability to schedule and manage training

## How it Works

TRAX captures operational video straight from the specific simulator or plant control room, and returns to the TRAX office to record the audio and assemble the video into a complete lesson. The tutorials are delivered as local files that can be accessed on the instructor station, operator station, or tablet. Plant-specific tutorials can also be made available as private videos on YouTube.

TRAX Tutorial Lessons may be presented as local files or as unlisted YouTube videos that are only available to the assigned user. View an example video here: <https://youtu.be/XfHbFeEH-JA>
